

Drainer Jig

Key Features:

- Unika quality precision made tool which will last for many years.
- 12mm Compact Laminate guaranteed never to warp.
- 10mm cut required less router work and produces a neater joint
- The Drainer Jig routs sloping drainage grooves in natural wood, compact laminate and solid surface worktops, commonly used with popular Belfast and undermounted sinks.
- The new grooves are now 6mm deep so they can be used on slim line surfaces like compact laminate and quartz.

- Each groove is approx. 450mm in length.

Required:

10mm Radius router cutter for Drainage grooves. Other shape and dimension cutters can be used to vary the appearance of the groove, although the cutter must pass through the internal diameter of the guide bush.
