------------------	-------

Dónde aplicarlo

The Anticaloric Enamel Spray is suitable for painting, decorating and / or repairing metallic surfaces (iron, aluminum, steel, etc.), where they need to resist high temperatures, up to 600°C. It can be applied both indoors and outdoors.

Precauciones

- Apply with good ventilation.
- Do not apply with risk of frost or rain.
- Do not apply in conditions of strong winds or in direct sun.
- Once applied, temper the article in which it has been applied to about 200°C, and allow to cool. After this, the article can be used in the usual way.

Modo de empleo

Preliminary considerations

- Surfaces must be clean and dry, free of rust, dust, grease, salt, humidity, etc. The parts to be painted must be degreased or sanded so that they are completely clean.
- Shake the spray for about a minute. Vaporize two coats at a distance of about 30 cm and crosswise.
- Once applied, temper the item that has been treated to about 200°C and allow to cool. After this, the article can be used in the usual way.

* Avoid during spraying elements that can produce sparks. Flammable.

Almacenamiento

- In its original closed container, at non-extreme temperature and humidity.
- Keep out of direct sunlight.

Formatos

400 ml format

Memoria descriptiva

In simple applications

The painting and / or decoration, indoors or outdoors, of metallic surfaces will be done with the Anticaloric Enamel Spray from the company Pinturas Jafep. The support must be clean, dry and free of rust, dust, grease, salt and humidity. The general recommendations of the manufacturer will be respected.
